## ACOVAL spray nozzles

### Introduction

The ACOVAL spray nozzles are designed to spray liquids on extended areas. VIBRACO produces two main types of spray nozzles:

- the coaxial spray nozzles
- the flat jet spray nozzles.

### Way of functioning

In the case of the coaxial spray nozzles, the gas sucks the liquid up and sprays it.

In the case of the flat jet spray nozzles, nozzles are fed in pressurized liquid. The gas is used to spray the liquid. These nozzles are pneumatically driven. The liquid flow, the jet shape and the spraying thinness are adjustable. They allow to spray liquid of a wide range of viscosities. A nozzle may cover 300mm wide.

### Spray coaxial nozzles

**Flat jet spray nozzles with stainless parts to drive the liquid**
