Spraying control centres

Way of functioning

The spraying control centre feeds the [spraying nozzles](#) with liquid and gas. The pressures are steady and appropriate. It can manage several nozzles independently or by groups. It can be fed by one or several tanks or casks. The parts of the spraying control centre may all be at the same place or separated.

Applications

ACOVAL spraying control centre are principally used to spray products on area larger than whose lubricated by microlubrication systems.

Samples

Spraying control centre with six nozzles in two racks

Spraying control centre with eight nozzles in two racks

Eight nozzle switches

Nozzle selecting compartment

The selecting compartment is located near the worker.

Spraying control centre with two independently adjusted nozzles
